

Renewable Energy Consulting and Financial Advisory Services

Radian Generation manages, protects, and optimizes solar, wind and energy-storage projects throughout an asset's lifecycle.

Renewable Energy Consulting

Radian Generation's development and construction consulting and advisory services offering draws upon years of technical and financial expertise for all types of renewable power plants. Whether performing a fixed scope of work to support a single issue or working under a retainer contract for ongoing activities, Radian's team of professionals is available to support the following types of activities and contract reviews:

- » Performance modeling
- » Operational cost assumptions
- » Weather dataset review
- » Site visits and inspections
- » Independent engineering reports
- » EPC agreements
- » Power purchase agreements
- » O&M agreements
- » Regulatory and compliance requirements
- » Equipment supply agreements
- » Interconnection agreements
- » O&M and subcontractor selection

Investor and Advisory Services

Radian Generation offers a number of advisory services to support both renewable energy owners and investors; years of experience guiding power plant owners on very complicated fiscal and performance-related topics provides a unique perspective on how to engage on project financial issues. Through the LENS™ platform, Radian is able to host a variety of metrics and reports to support the following activities:

- » Portfolio concentration risk assessment
- » Project operations review
- » Partnership distribution analysis and validation
- » Asset management oversight
- » Partnership reporting requirements
- » Portfolio budget variance analysis
