

STANDARDS COMPLIANCE INTELLIGENCE PORTAL (SCIP)

COMPLIANCE UN-COMPLICATED

Staying on top of regulatory standards is critical but challenging for facilities in the rapidly expanding renewable energy sector. The Standards Compliance Intelligence Portal (SCIP) offers a streamlined solution that empowers your team to track, understand, and meet compliance requirements with ease.

WHY YOU NEED SCIP

Keep Up With Change:

SCIP consolidates all regulatory updates in one platform, saving you time and reducing the complexity of researching into sites, emails, and newsletters.

Know Your Compliance Standards:

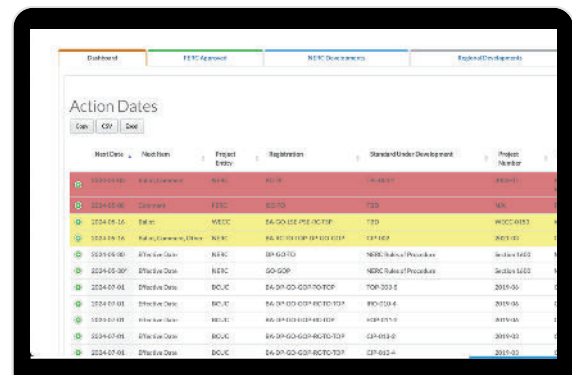

Entity-specific guidance based on your registration region and CIP impact level is included with each SCIP entry, eliminating confusion about which standards apply to your operations.

Stay Ahead of Deadlines:

Keep track of important deadlines with SCIP. Past dates are highlighted in red with upcoming changes in yellow, ensuring you're always aware of critical days on your calendar.

Simplify the Complex:

Expert feedback on entries breaks down complex standards and provides recommendations specific to your facility.

HOW SCIP WORKS

Built by Compliance Professionals:

Our compliance experts gather updates from NERC, FERC, each of the regional entities and more. Beyond simply populating a database, our SMEs provide guidance including recommendations and how you should prepare to adapt your compliance processes. Whether you have a compliance team of one or several, with SCIP you add our seasoned team of professionals to your knowledge base.

Customized to Your Needs:

SCIP tailors compliance tracking to your facility by filtering only the relevant standards based on your specific registration and region. No more sifting through irrelevant regulations—you'll see only what applies to you, cutting through noise and ensuring you stay focused on what's critical for your operations.

User-Friendly Interface:

SCIP's straightforward interface makes navigating complex compliance information easy. Standards are organized by region, registration type, and impact level, and includes features like color-coded deadlines, clear summaries of regulatory changes, and links to related webinars or documents.
